

Professional headsets for fire brigade & rescue

Made in
Germany

Headsets proven under the most extreme conditions

During firefighting operations, uninterrupted communication flows among colleagues and superiors may not only be vital to the success of the operation: lives may depend on them. When choosing the appropriate solution, one has to consider ergonomics, wearing comfort and the specific requirements of the operational area in which communication takes place. Fire fighters need to be able to keep their hands free during operations, so Imtradex developed an extra-robust neckband headset, and a complete helmet set that can be adjusted separately.

With the FireTalk helmet set, Imtradex offers a communications solution specifically for fire departments which, even in conditions of extreme heat, reliably ensures smooth communications among fire fighters. FireTalk consists of a waterproof electret gooseneck microphone and a splash- and shock-resistant send button. With the Aurelis Nexus, Imtradex brings an innovative, ultra-lightweight handheld microphone to the market, which is setting standards for digital communication, security and flexibility in the emergency services sector.

Fire brigade & Rescue
